KPI definitions

All KPIs are calculated from the 2025 booking dataset on a stay-night basis

KPI	Formula
Occupancy %	Room nights sold / room nights available (rooms x days)
ADR	Room revenue / paid room nights (complimentary stays excluded)
RevPAR	Room revenue / room nights available
Room revenue	Sum of ADR over occupied nights
Room type performance	Occupancy, ADR and RevPAR calculated per hotel and room type
Booking pace	Cumulative % of room nights already booked N days before arrival
Pickup	Share of room nights booked within each window before arrival
Segment and channel analysis	Room nights, ADR, cancellation rate (all bookings) and median lead time by group
TRevPAR	Total revenue (all departments) / room nights available
GOPPAR	Gross operating profit / room nights available (illustrative cost model)
F&B per guest night	(Restaurant + bar revenue) / guest nights
Spa per guest night	Spa revenue / guest nights
Meetings & Events revenue	Meeting and event revenue, mainly from Group and Corporate bookings
Revenue mix, ancillary share	Department revenue / total revenue; non-room revenue / total revenue
Profitability by department	Department revenue x assumed margin, less undistributed expenses = GOP

Produced by Hosea Ngo Sali
Not to be duplicated
or redistributed

Data and cost assumptions

Read before interpreting profit figures

Data notes

- Synthetic dataset: 15,500 reservations, 2 hotels (60 and 66 rooms), arrivals 1 Jan to 31 Dec 2025.
- Stays are expanded to nights. Cancelled bookings carry no revenue and no room nights.
- Ancillary revenue is spread evenly across the nights of a stay.
- January excludes stays that began in December 2024, so early-January occupancy is slightly understated.
- Cross-check: the dataset's own occupancy column averages 65.9% (City) and 67.8% (Resort), against 65.8% and 67.5% here.

Illustrative cost assumptions

Department	Assumed margin
Rooms	72%
Food & Beverage	30%
Spa	35%
Meetings & Events	45%
Other	50%
Undistributed expenses	30% of total revenue

The dataset has no cost data. These margins are assumptions for demonstration, so GOP, GOPPAR and departmental profit are model outputs, not recorded results. Replace them with actual P&L ratios before using them for decisions.
