Executive summary

Portfolio of 126 rooms across two hotels, arrivals 1 January to 31 December 2025

Occupancy	ADR	RevPAR	TRevPAR	GOPPAR
66.7%	€123.7	€82.2	€128.3	€36.3

Resort earns more per room
Resort RevPAR is €89.4 against €74.3 at City, driven by ADR (€132.8 against €113.5). TRevPAR gap is wider: €153.0 against €101.2.

Demand is highly seasonal
City peaks in Mar (80%), Resort in Jul (89%). Lowest months: City Dec (45%), Resort Jan (41%).

Cancellations cost demand
24.4% of bookings cancel. Online travel agencies cancel at 37.8%, direct website at 21.9%.

Ancillary revenue adds a third
Non-room revenue is 35.9% of total revenue (Resort 41.6%, City 26.5%).

Rooms KPIs

Occupancy = room nights sold / available | ADR = room revenue / paid room nights | RevPAR = room revenue / available room nights

What the data shows

- Resort leads on RevPAR (€89.4 against €74.3) through a higher ADR and slightly higher occupancy (67.5% against 65.8%).
- Occupancy peaks in Mar at City (80%) and Jul at Resort (89%).
- Room revenue totals €3.78M: Resort €2.15M (57%), City €1.63M.

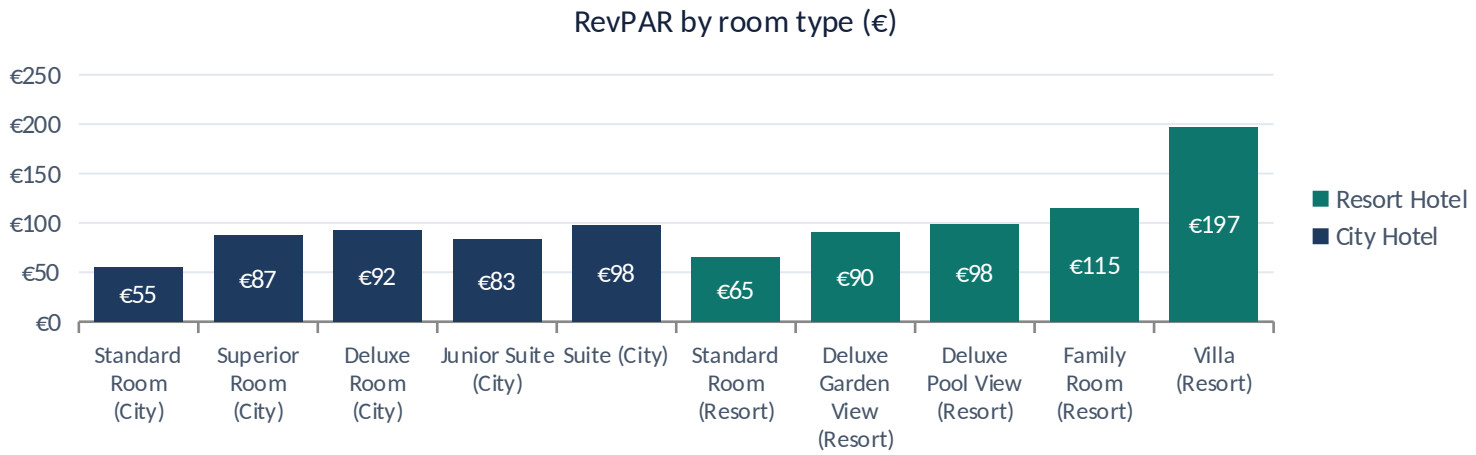

Produced by Hosea Ngo Sali | Not to be duplicated or redistributed

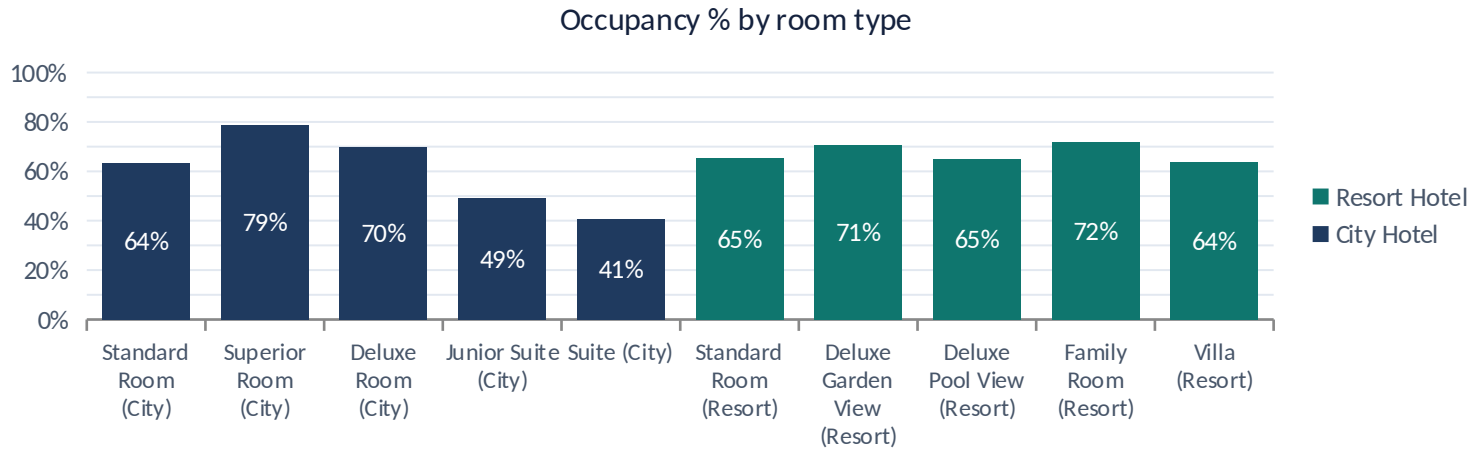

Room type performance

RevPAR and occupancy by room type, each calculated on that room type's own available nights

What the data shows

- Highest RevPAR: Villa (Resort) at €197, with 64% occupancy and €311 ADR.
- Highest occupancy: Superior Room (City) (79%). Lowest: Suite (City) (41%).
- At City, the Suite earns the most per available room (€98).
- City suites earn the highest ADR (€240) but sell the fewest nights (41% occupancy).

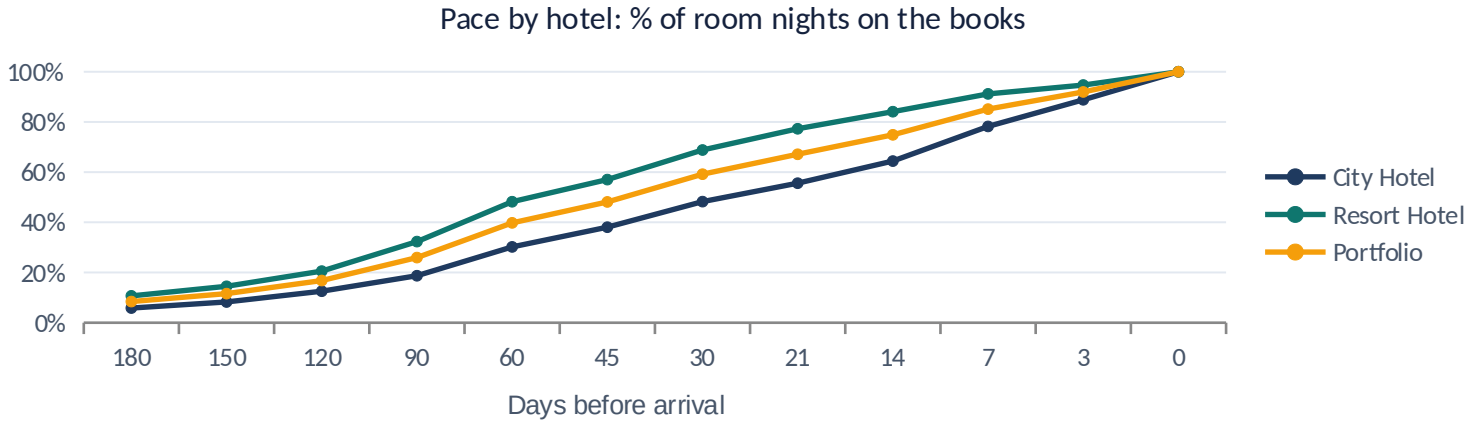

Produced by Hosea Ngo Sali | Not to be duplicated or redistributed

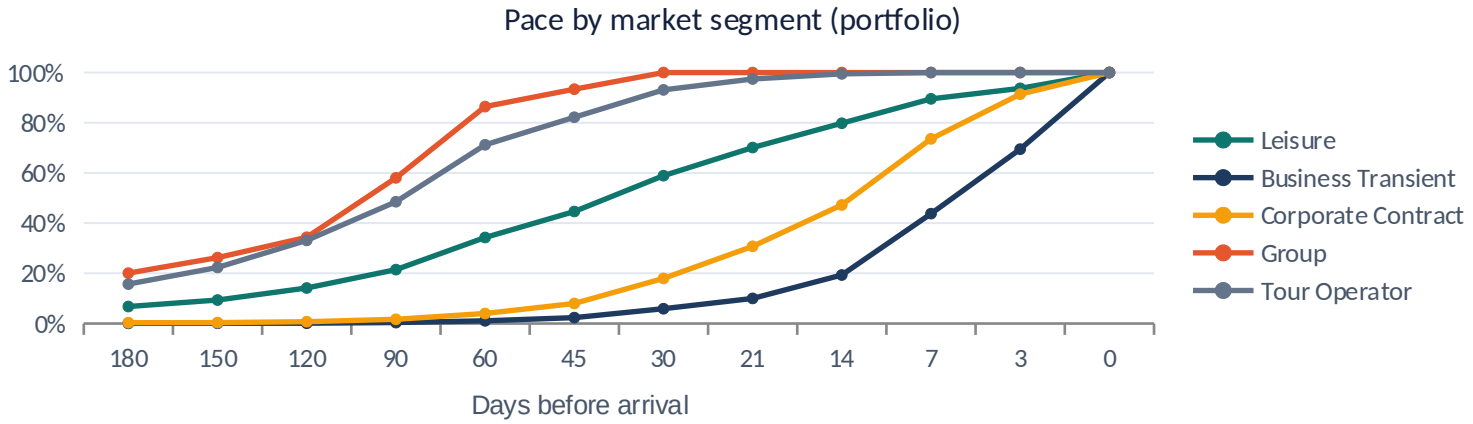

Booking pace

Pace = cumulative share of room nights already booked N days before arrival (stayed bookings)

What the data shows

- At 60 days out, 48% of Resort room nights are booked against 30% at City.
- At 30 days out: Resort 69%, City 48%.
- Groups book earliest: 58% of group room nights are on the books 90 days out.
- Business Transient books latest: 44% on the books one week before arrival.

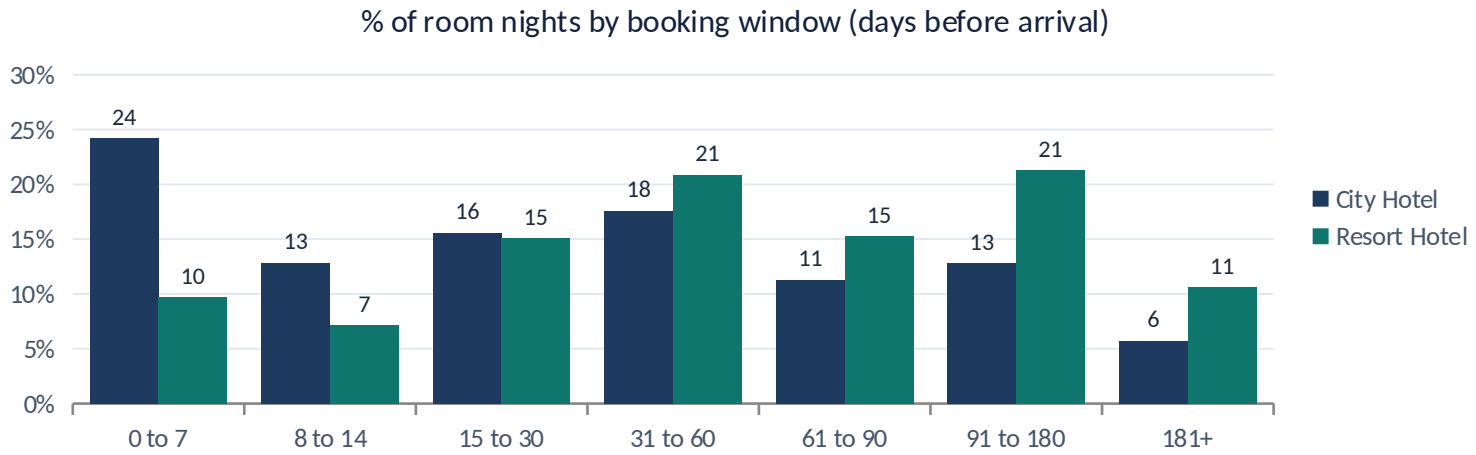

Produced by Hosea Ngo Sali | Not to be duplicated or redistributed

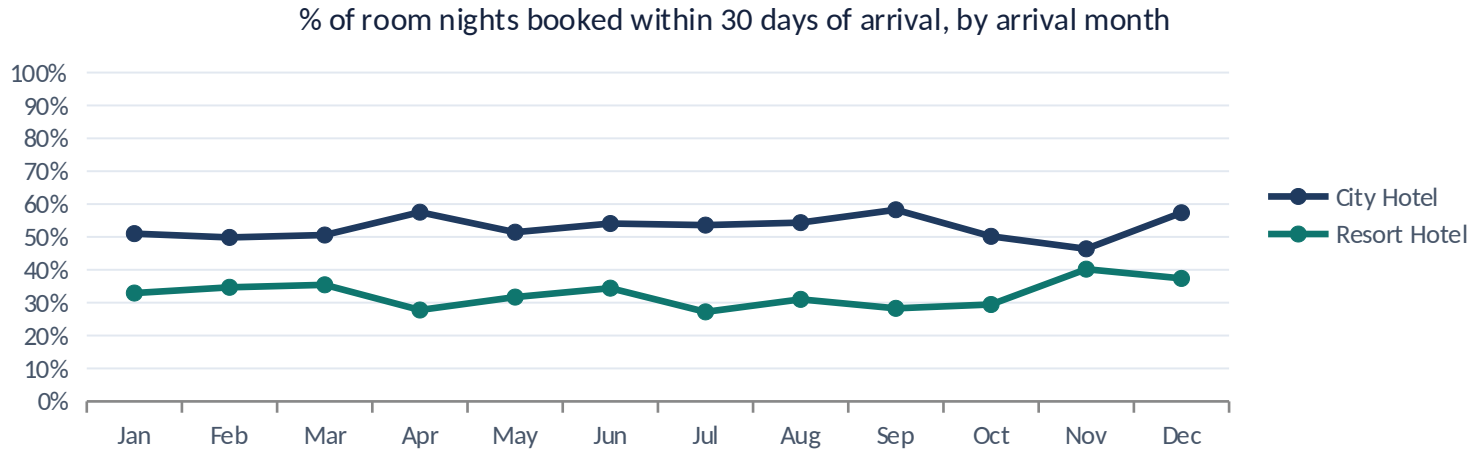

Pickup

Pickup = share of room nights booked within each window before arrival

What the data shows

- 24.2% of City room nights are booked in the final 7 days, against 9.7% at Resort.
- In the final 30 days: City 52.6%, Resort 31.9%.
- Portfolio: 41.6% of room nights are picked up in the last 30 days, and 58.4% are booked more than 30 days ahead.
- City relies more on late pickup, so it needs closer daily monitoring.

Market segment analysis

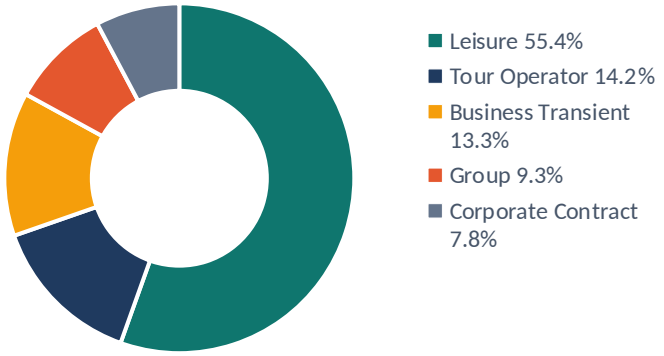

Contents | Back | Next

Portfolio view: room revenue share, ADR, cancellation rate (all bookings), median lead time and ancillary share of revenue

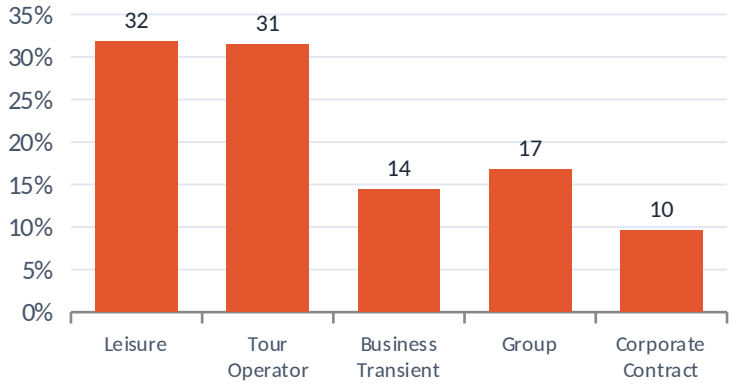

What the data shows

- Leisure is the largest segment with 55.4% of room revenue.
- Highest ADR: Leisure (€138). Lowest: Tour Operator (€100).
- Cancellations are highest for Leisure (31.9%) and lowest for Corporate Contract (9.6%).

Room revenue share

Cancellation rate (% of bookings)

Segment	Nights share	ADR	Median lead	Ancillary %
Leisure	49.6%	€138	36 days	36.7%
Tour Operator	17.6%	€100	88 days	41.1%
Business Transient	12.6%	€130	5 days	19.9%
Group	11.3%	€101	94 days	47.3%
Corporate Contract	8.6%	€112	12 days	23.8%
Complimentary	0.4%	n/a	0 days	0.0%

Channel analysis

Portfolio view: room revenue share, ADR, cancellation rate (all bookings), median lead time and ancillary share of revenue

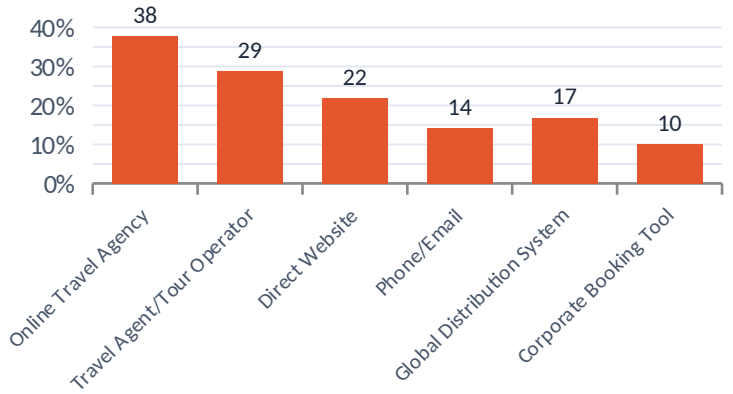

What the data shows

- Online Travel Agency is the largest channel with 25.0% of room revenue.
- Highest ADR: Direct Website (€138). Lowest: Travel Agent/Tour Operator (€111).
- Cancellations are highest for Online Travel Agency (37.8%) and lowest for Corporate Booking Tool (10.1%).

Room revenue share

Cancellation rate (% of bookings)

Channel	Nights share	ADR	Median lead	Ancillary %
Online Travel Agency	22.7%	€136	26 days	35.6%
Travel Agent/Tour Operator	25.7%	€111	77 days	40.4%
Direct Website	19.2%	€138	24 days	34.3%
Phone/Email	17.3%	€117	58 days	39.4%
Global Distribution System	8.2%	€115	10 days	27.8%
Corporate Booking Tool	6.5%	€119	10 days	21.7%
Front Desk	0.4%	n/a	0 days	0.0%

Total hotel KPIs

TRevPAR = total revenue / available room nights | GOPPAR = gross operating profit / available room nights (illustrative cost model)

What the data shows

- TRevPAR is €128.3 against RevPAR of €82.2: ancillary revenue adds €46.1 per available room.
- Resort TRevPAR (€153.0) is 51% above City (€101.2), a wider gap than on RevPAR (20%).
- GOPPAR is €36.3 (Resort €39.3, City €33.0) under the assumed cost model.

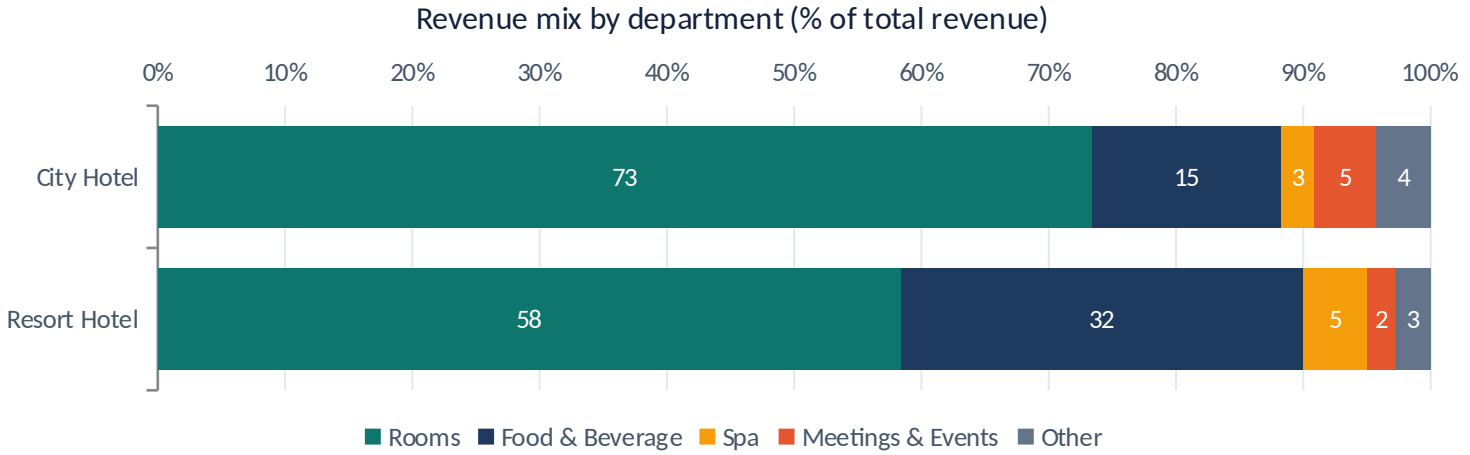

Produced by Hosea Ngo Sali | Not to be duplicated or redistributed

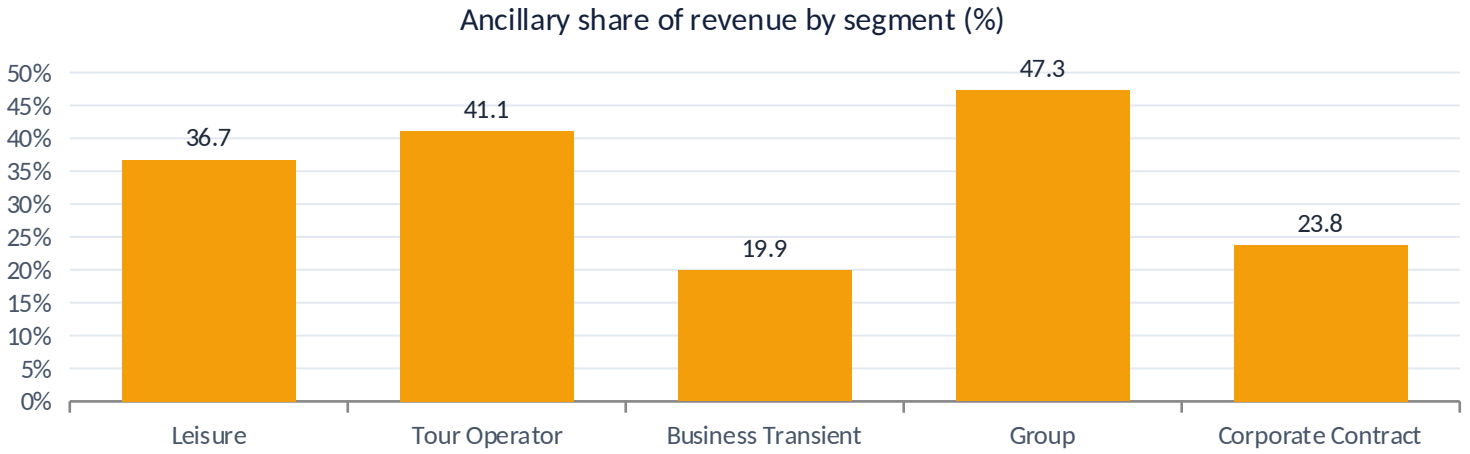

Revenue mix and ancillary contribution

Ancillary contribution = non-room revenue / total revenue

What the data shows

- Rooms generate 64.1% of revenue; food and beverage adds 25.3%.
- Ancillary share: Resort 41.6% against City 26.5%.
- Each occupied room night brings €69.1 of ancillary revenue (Resort €94.3, City €40.8).
- Group guests have the highest ancillary share by segment.

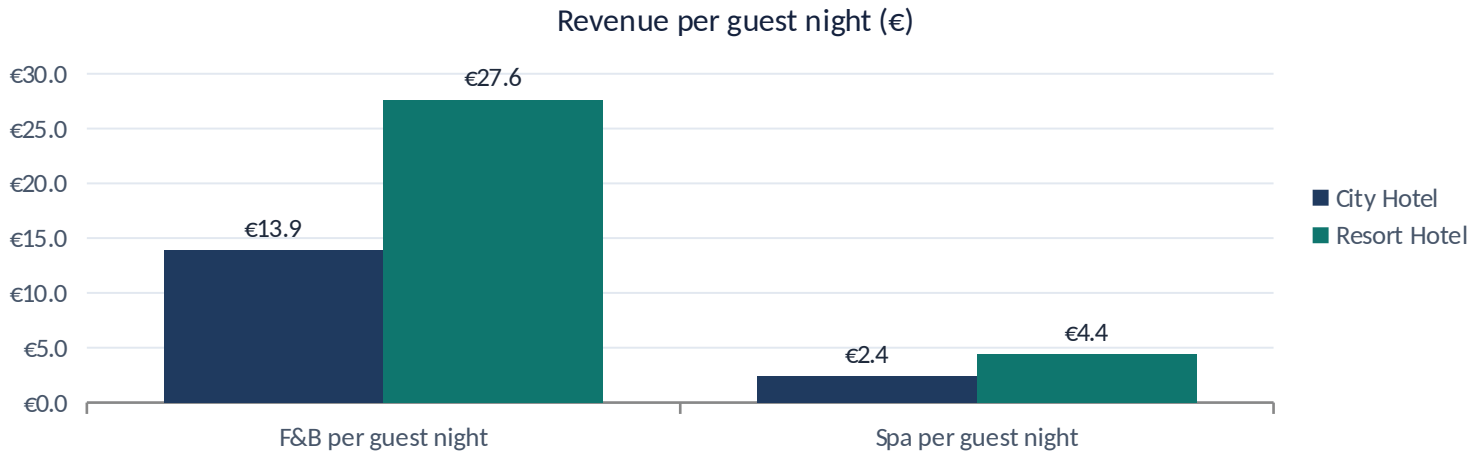

Produced by Hosea Ngo Sali | Not to be duplicated or redistributed

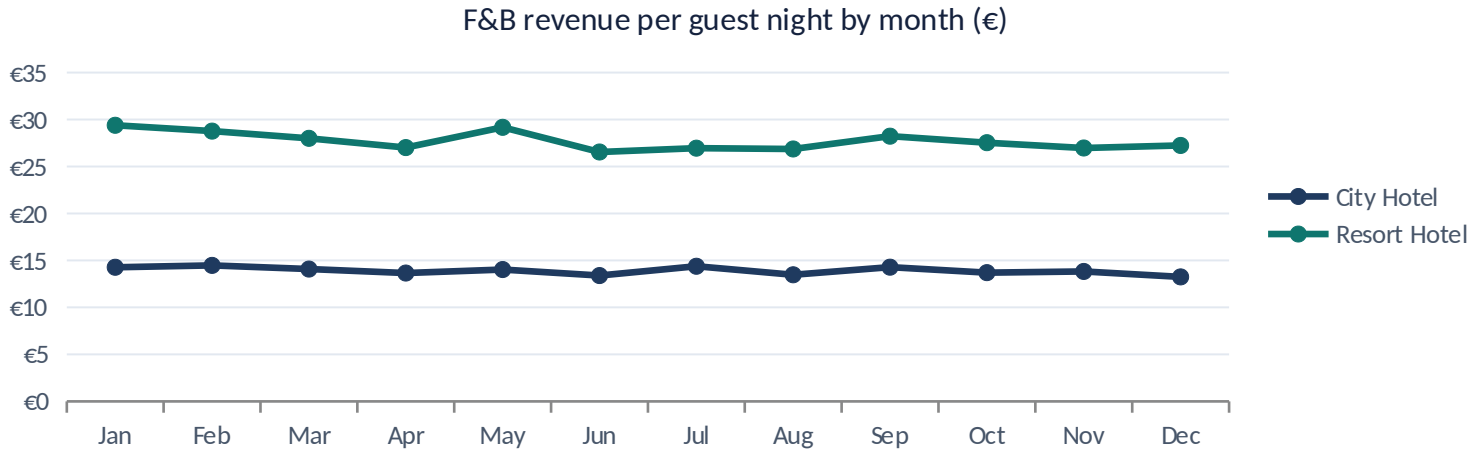

F&B and spa revenue per guest

Per guest night = department revenue / (guests x nights stayed)

What the data shows

- F&B revenue is €22.7 per guest night: Resort €27.6, City €13.9.
- Spa revenue is €3.7 per guest night: Resort €4.4, City €2.4.
- 29.1% of Resort stays include spa spend, against 7.8% at City.
- Resort guests spend about twice as much on F&B per night, and about half of Resort stays are on half-board or full-board plans, against 5% at City.

Produced by Hosea Ngo Sali | Not to be duplicated or redistributed

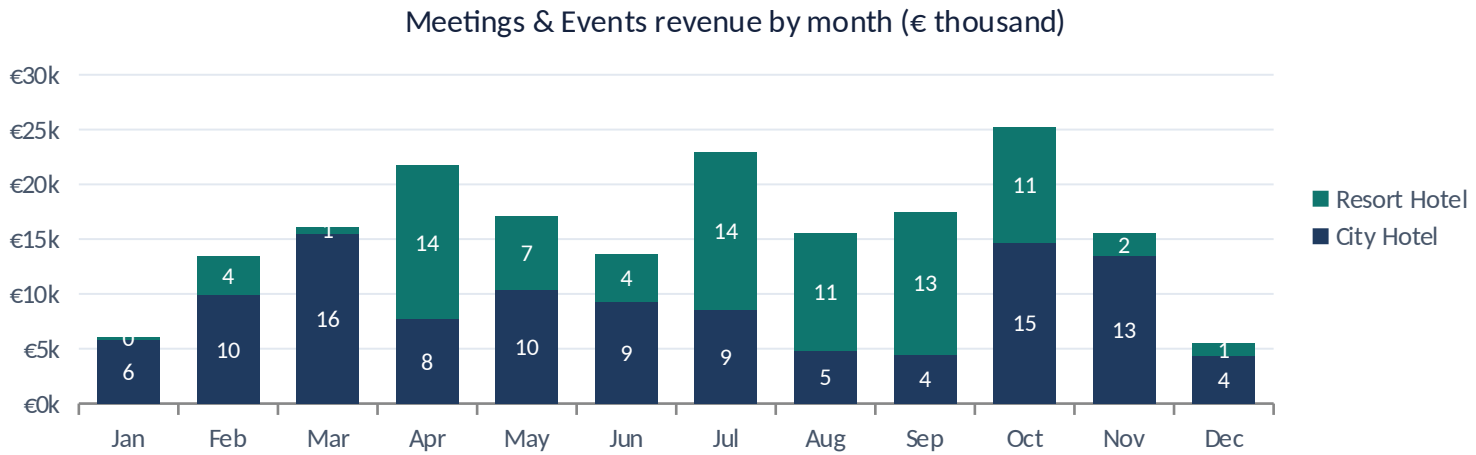

Meetings and events revenue

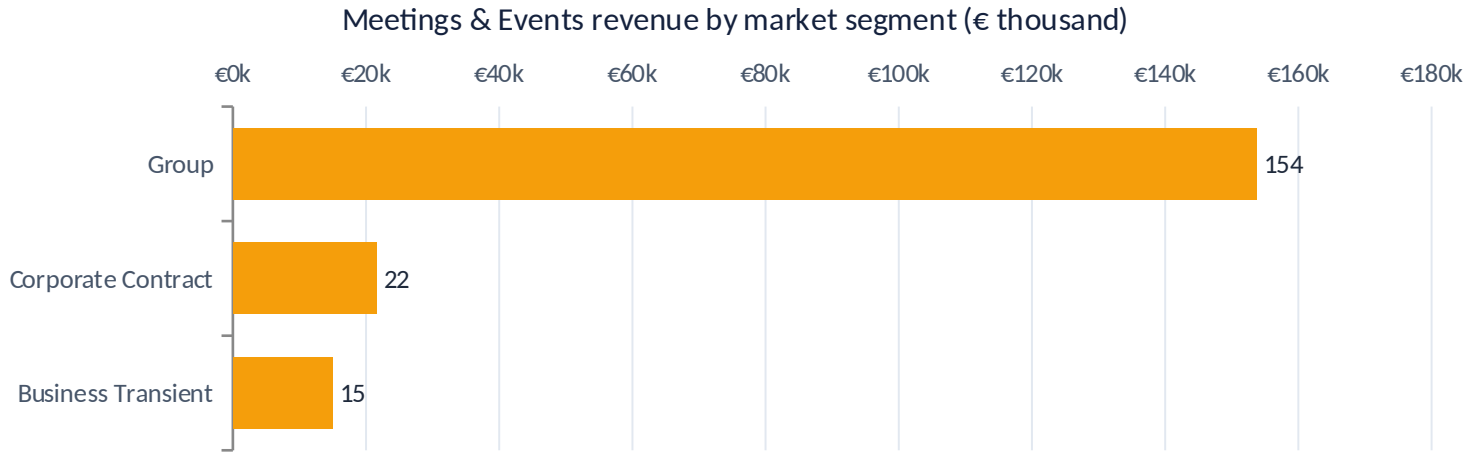

Contents | Back | Next

Meeting and event revenue, shown on a stay-night basis

What the data shows

- Meetings and events bring €190k (3.2% of revenue): City €109k, Resort €81k.
- Group bookings generate 81% of event revenue.
- City earns 4.9% of its revenue from meetings, against 2.2% at Resort.
- Event revenue peaks in Oct (€25k).

Profitability by department

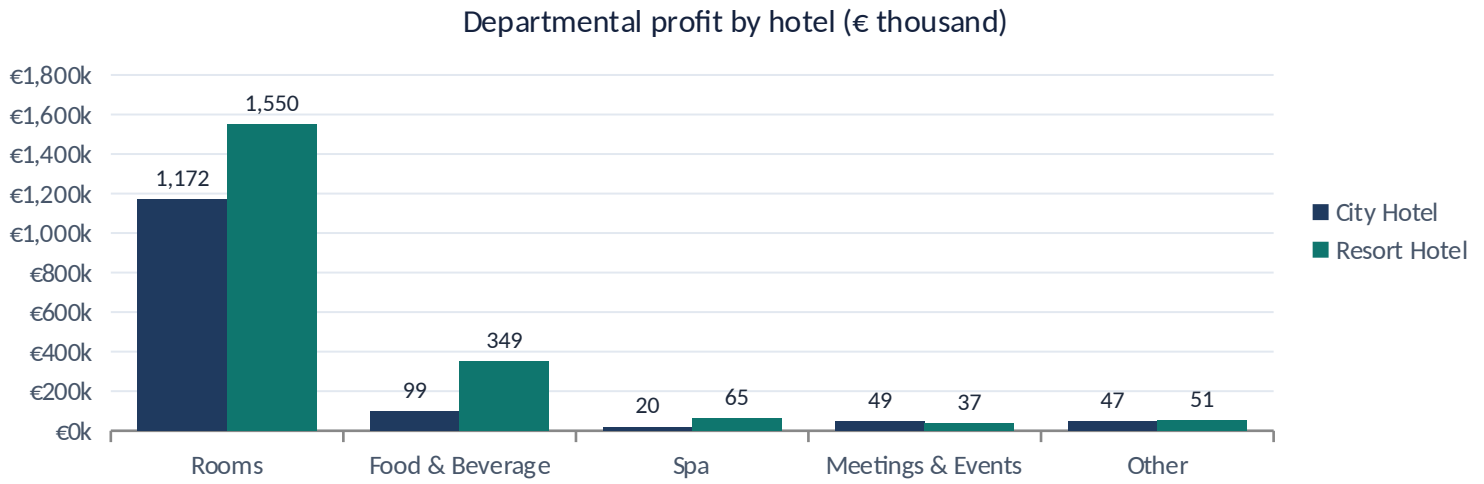

Departmental profit = revenue x assumed margin | GOP = departmental profit less undistributed expenses (illustrative cost model)

What the data shows

- GOP is €1.67M (28.3% margin). Resort €0.95M at 25.7%, City €0.72M at 32.6%.
- Rooms provide 79.2% of departmental profit.
- City converts more revenue to profit (higher rooms share), while Resort earns more in absolute terms.

Assumption notice

The dataset has no cost data. Margins are illustrative, so profit figures are model outputs, not recorded results.

€	City Hotel	Resort Hotel	Portfolio
Total revenue	€2.22M	€3.69M	€5.90M
Departmental profit	€1.39M	€2.05M	€3.44M
Undistributed expenses	€0.66M	€1.11M	€1.77M
Gross operating profit	€0.72M	€0.95M	€1.67M
GOP margin	32.6%	25.7%	28.3%
GOPPAR	€33.0	€39.3	€36.3

Produced by Hosea Ngo Sali | Not to be duplicated or redistributed

Recommendations

Actions suggested by the data in this report

1 Defend Resort peak rates

Resort occupancy reaches 89% in Jul. Raise rate floors and minimum stays in the peak months.

2 Fill City low months

City occupancy falls to 45% in Dec. Target corporate and group demand for the lowest months.

3 Reduce cancellation exposure

Online travel agencies cancel at 37.8% and advance purchase rates at 14.0%, against 31.5% for flexible rates. Steer demand to direct and non-refundable plans.

4 Forecast groups separately

Groups are 58% booked 90 days out and produce 81% of event revenue. Track them apart from transient pickup.

5 Grow City ancillary

City earns €13.9 F&B and €2.4 spa per guest night, against €27.6 and €4.4 at Resort. Test packages for City leisure guests.

6 Replace assumptions with actuals

GOP and departmental profit use illustrative margins. Load real departmental costs to turn these figures into decisions.

Method and assumptions

How the numbers were built and what to keep in mind

Data notes

- Synthetic dataset: 15,500 reservations at two hotels (60 and 66 rooms), arrivals 1 Jan to 31 Dec 2025.
- Stays are expanded to nights; cancelled bookings carry no revenue and no room nights.
- Ancillary revenue is spread evenly across the nights of a stay.
- January excludes stays that began in December 2024, so early-January occupancy is slightly understated.
- Cross-check: the dataset's own occupancy column averages 65.9% (City) and 67.8% (Resort), against 65.8% and 67.5% here.

Illustrative cost assumptions

Department	Assumed margin
Rooms	72%
Food & Beverage	30%
Spa	35%
Meetings & Events	45%
Other	50%
Undistributed expenses	30% of total revenue

No cost data exists in the dataset. GOP, GOPPAR and departmental profit are model outputs based on these assumptions. Replace them with actual P&L ratios before using the profit figures for decisions.
